

Register yourself

The screenshot shows the 'Anti-Malware from GOTMLS.NET' settings page. The left sidebar contains navigation options like Dashboard, Posts, Gauges, Media, Forms, Pages, Canvas Child, Appearance, Plugins, Users, Tools, Visual Composer, Settings, and Anti-Malware. The main content area is titled 'Scan Settings' and includes sections for 'What to look for', 'What to scan', 'Scan Depth', 'Skip files with the following extensions', 'Skip directories with the following names', and 'Scan Logs'. The right sidebar contains 'Updates & Registration' information, including WordPress version, Plugin version, Definitions, and a registration form. The registration form has two red boxes: one around the 'Your Full Name' field and another around the 'Your Email Address' field. Below the email field is a 'Register Now' button, also highlighted with a red box. The bottom of the page shows 'Resources & Links' and a 'Donate' button.

Anti-Malware from GOTMLS.NET is a fantastic plugin. This has helped me on a number of occasions to remove a bit of junk that's been inserted into someone's website because I did not keep their plugins up-to-date. Before you can install Anti-Malware from GOTMLS.NET, you need to do a free activation. To do that, you need to register an account by providing your name and email address. Afterward, click on Register Now.

Download the definition

The screenshot shows the 'Anti-Malware from GOTMLS.NET' settings page. The left sidebar contains navigation options like Dashboard, Posts, Gauges, Media, Forms, Pages, Canvas Child, Appearance, Plugins, Users, Tools, Visual Composer, Settings, SEO, and Anti-Malware. The main content area is titled 'Scan Settings' and includes a 'Quick Scan' section with buttons for 'WP Core', 'Plugins', and 'Themes', and a 'Run Complete Scan' button. Below this, there are sections for 'What to look for' (listing various threats like htaccess, TimThumb, Backdoor Scripts, Known Threats, Core File Changes, and Potential Threats) and 'Skip directories with the following names'. A 'Scan Logs' section at the bottom shows 'No Scans have been logged'. On the right, there is an 'Updates & Registration' section with a notification box that says 'Your installation Key is Registered. New Definition Updates Are Available! Download new definitions!'. Below this is a 'Resources & Links' section with a donation button and social media links.

After you have successfully registered, a message “Your installation Key is Registered” will be seen. Then, download the definition.

Confirmation message

The screenshot displays the 'Anti-Malware from GOTMLS.NET' settings page. A red box highlights a confirmation dialog box that appears after a successful download. The dialog box contains the following text:

www.newcastleoutrigger.com.au says:
Downloaded Definitions
Please make a donation for the use of this wonderful feature!
OK

The background settings page includes sections for 'Scan Settings', 'Quick Scan', 'Updates & Registration', and 'Resources & Links'. The 'Scan Settings' section lists various threat types to look for, such as 'htaccess Threats', 'TimThumb Exploits', 'Backdoor Scripts', 'Known Threats', 'Core File Changes', and 'Potential Threats'. The 'Updates & Registration' section shows the current version of the plugin (4.4.5) and the definition version (4.16.38). The 'Resources & Links' section provides donation options and links to the GOTMLS.NET website, blog, forum, and reviews.

Once the downloading of the definition was successful, an information box will appear to let you know that you have successfully downloaded the definition. Click OK to proceed.

Start the scan

The screenshot displays the 'Anti-Malware from GOTMLS.NET' interface. The main content area is titled 'Scan Settings' and includes several configuration options:

- What to look for:** A list of checkboxes for 'htaccess Threats', 'TimThumb Exploits', 'Backdoor Scripts', 'Known Threats', 'Core File Changes', and 'Potential Threats'. A link for 'Donate \$29+ now to BETA test the new Scan Core File feature and get Automatic Definition Updates.' is present.
- What to scan:** Radio buttons for 'public', 'wp-content', and 'plugins'. The 'public' option is selected.
- Scan Depth:** A dropdown menu set to '-1' with the text 'how far to drill down (1 is infinite depth)'.
- Skip files with the following extensions:** A text input field containing 'png,jpg,jpeg,gif,bmp,tif,tiff,psd,svg,ico,doc,docx,rtf,fla,flv,mov,mp3,pdf,css,pot,po,mo,so,exe,zip,7z,gz,rar'.
- Skip directories with the following names:** A text input field with a placeholder 'a folder name or comma separated list of folder names to skip'.
- Automatically Update Definitions:** A message stating 'This new feature is currently only available for BETA testing to users who have donated above the default level. (No newer Definition Updates are available at this time.)' and a 'Save Settings' button.

At the top right of the 'Scan Settings' section, there are tabs for 'Quick Scan', 'WP-Core', 'Plugins', and 'Themes'. The 'Run Complete Scan' button is highlighted with a red box.

Below the 'Scan Settings' section is a 'Scan Logs' section with the message 'No Scans have been logged'.

The right sidebar contains 'Updates & Registration' information (WordPress 4.4.5, Plugin 4.16.38, Definitions: G99GR, Key: 7834b9b5dbeece09d1d0f8e96479f4) and 'Resources & Links' including a donation button and links to GOTMLS.NET, EPL's Blog, Email FEI, and Follow @GOTMLS.

Now, you can start the scan by clicking on Run Complete Scan.

Wait for the scan to finish

It's now scanning the relevant files in WordPress and find something that shouldn't be there. It will give you the option to remove the unnecessary files. There's Wait for the scan to finish.

These are Anti-Malware from GOTMLS.NET's features:

- Run a Complete Scan to automatically remove known security threats and backdoor scripts.
- Firewall block SoakSoak and other malware from exploiting Revolution Slider and other plugins from known vulnerabilities.
- Upgrade vulnerable versions of timthumb scripts.
- Download Definition Updates to protect against new threats.

Premium Features:

- Patch your wp-login and XMLRPC to block Brute-Force and DDoS attacks.
- Check the integrity of your WordPress Core files.
- Automatically download new Definition Updates when running a Complete Scan.

Now, it's not perfect of course. All these types of scanning tools have their own limitations. But, if you've got a simple hack like code injection or some files that were not supposed to be there, in my experience, this is very good at finding those and get rid of it. There is also a donation function but the plugin is completely free.

It also runs nice and cleanly. It will just chew its way through the website without overloading the server. It's a great plugin and I would give this a 5 out of 5 rating.
