

ADD SEPARATOR TO A COLUMN IN VISUAL COMPOSER

Step 1: Add new element

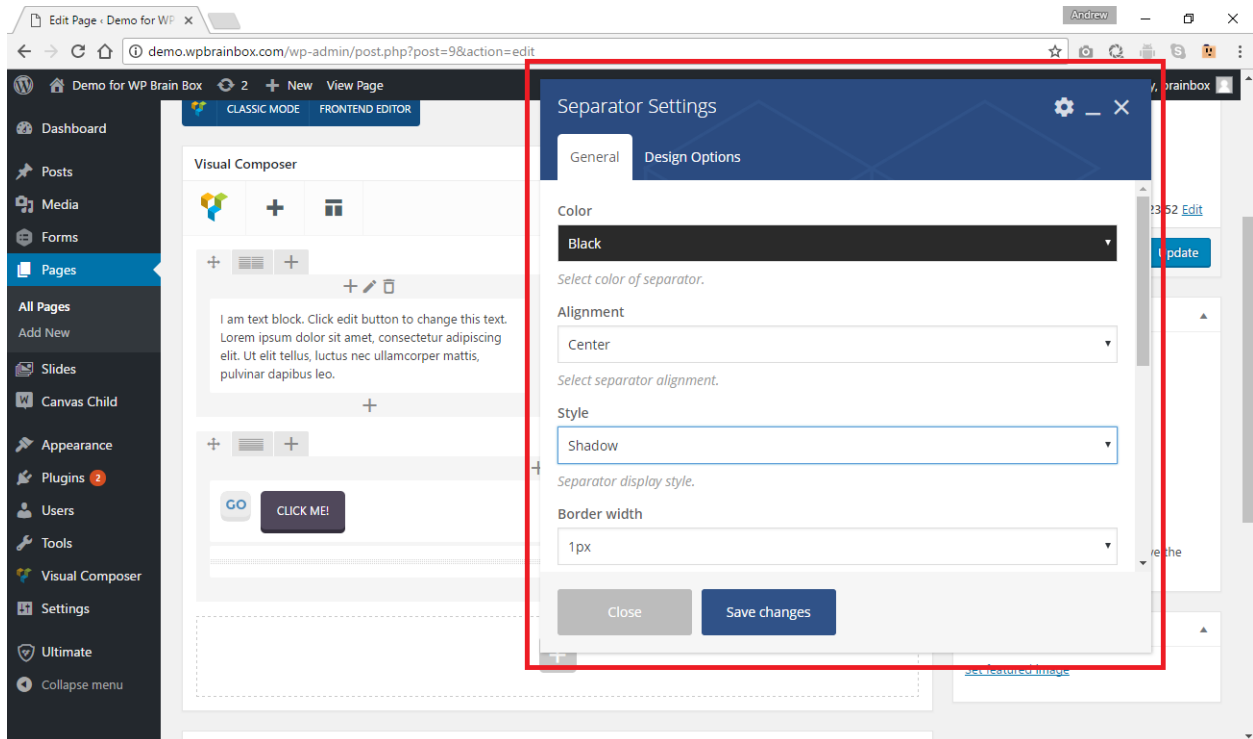

There are two types of the separator. First is the standard separator wherein it's just a horizontal line across the page. Let's try to add the standard separator. To do that, you can click on either of the + icons.

Step 2: Select Separator element

Select the **Separator** element to add the **standard separator**.

Step 3: Separator element Setting

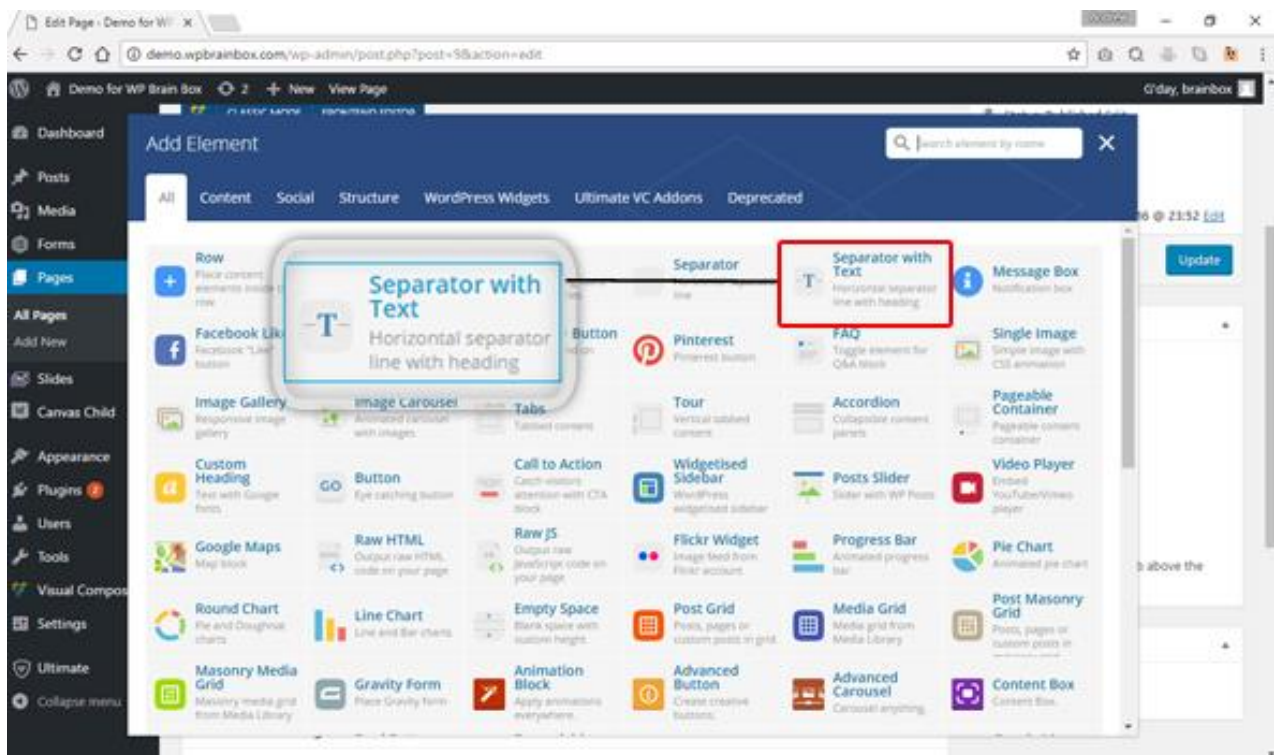

These are the general properties that you can manipulate inside the separator settings:

- **Color**
- **Alignment**
- **Style**
- **Border width**
- **Element width**

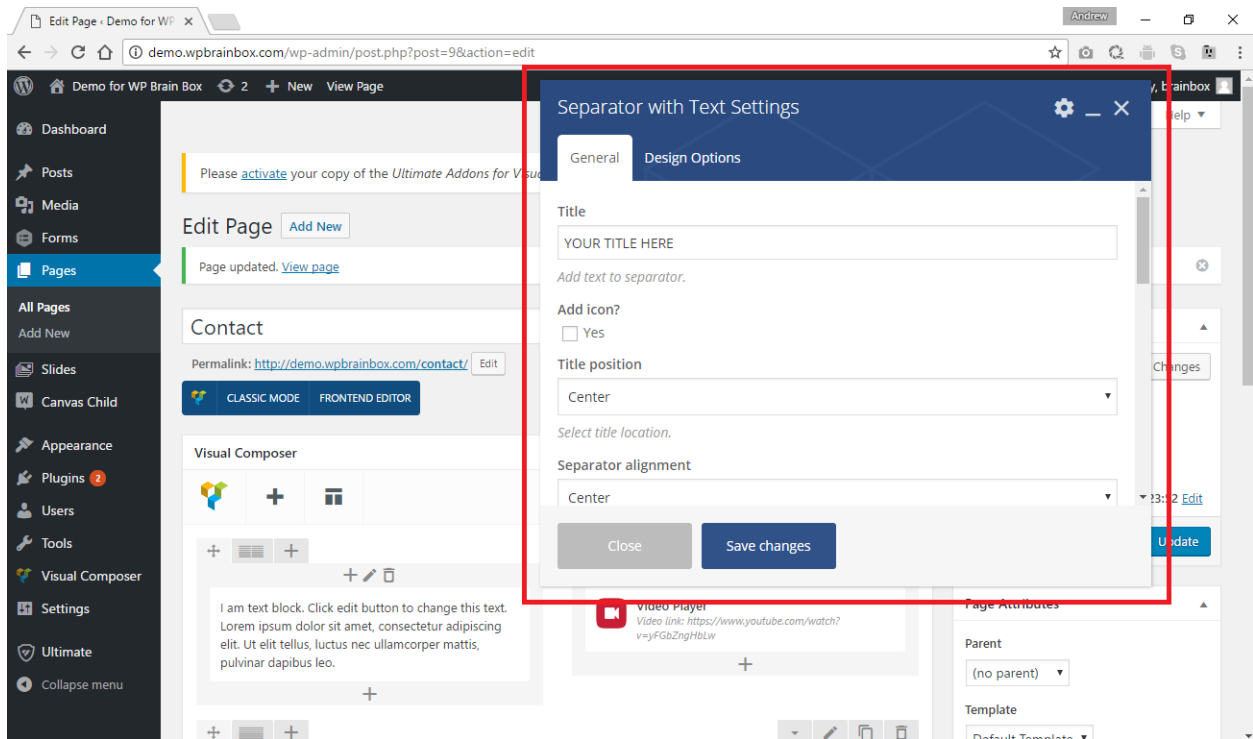

Once done with the changes, click on **Save Changes**.

AND

Separator with Text Element

The other type of separator is the **Separator with Text**. After selecting the Separator with Text element, a Separator with **Text Settings** box will pop-up.

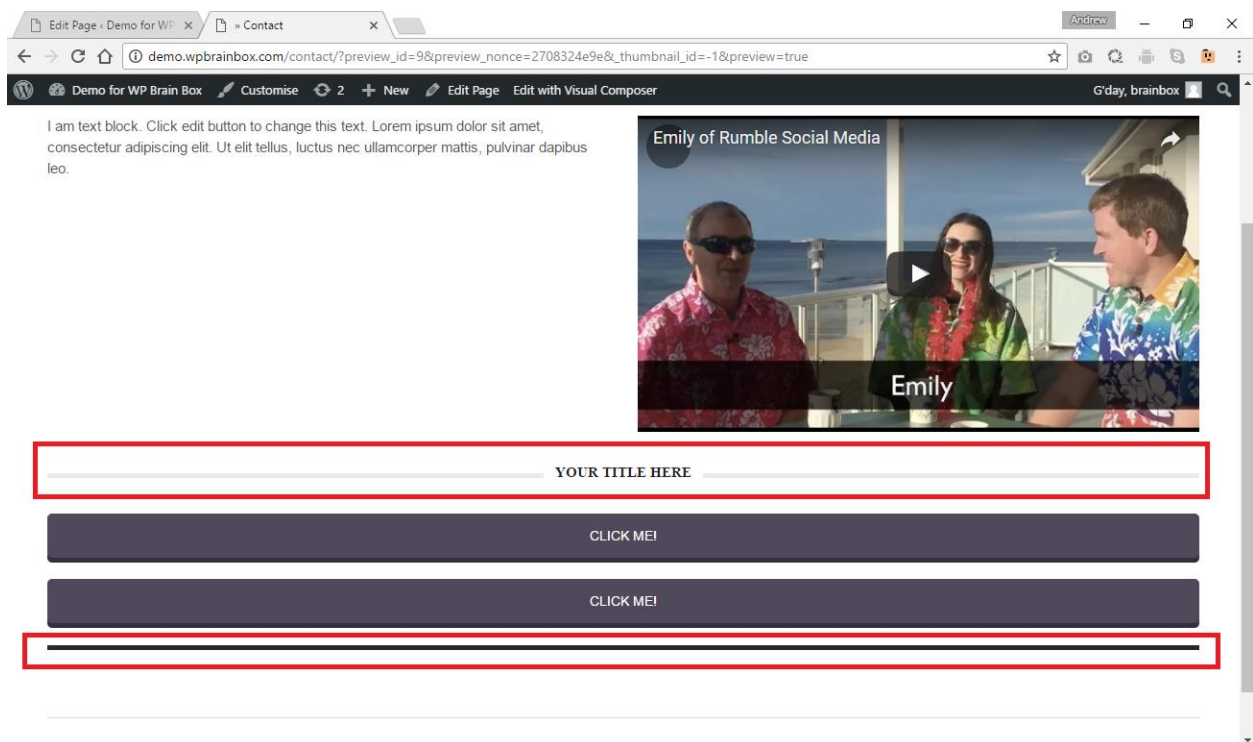

These are the general properties that you can manipulate inside the Separator with Text settings:

- **Title** – This is where you’ll place the text in the middle of the separator.
- **Icon**
- **Title position**
- **Separator alignment**
- **Color**
- **Style**
- **Border width**
- **Element width**

Once done with the changes, click on **Save Changes**. Now, let’s preview our changes by click on **Preview Changes**.

Output

Inside those red box are the separator that we added in our page.
