

ADD BUTTON TO A PAGE IN VISUAL COMPOSER

Backend Editor of Visual Composer

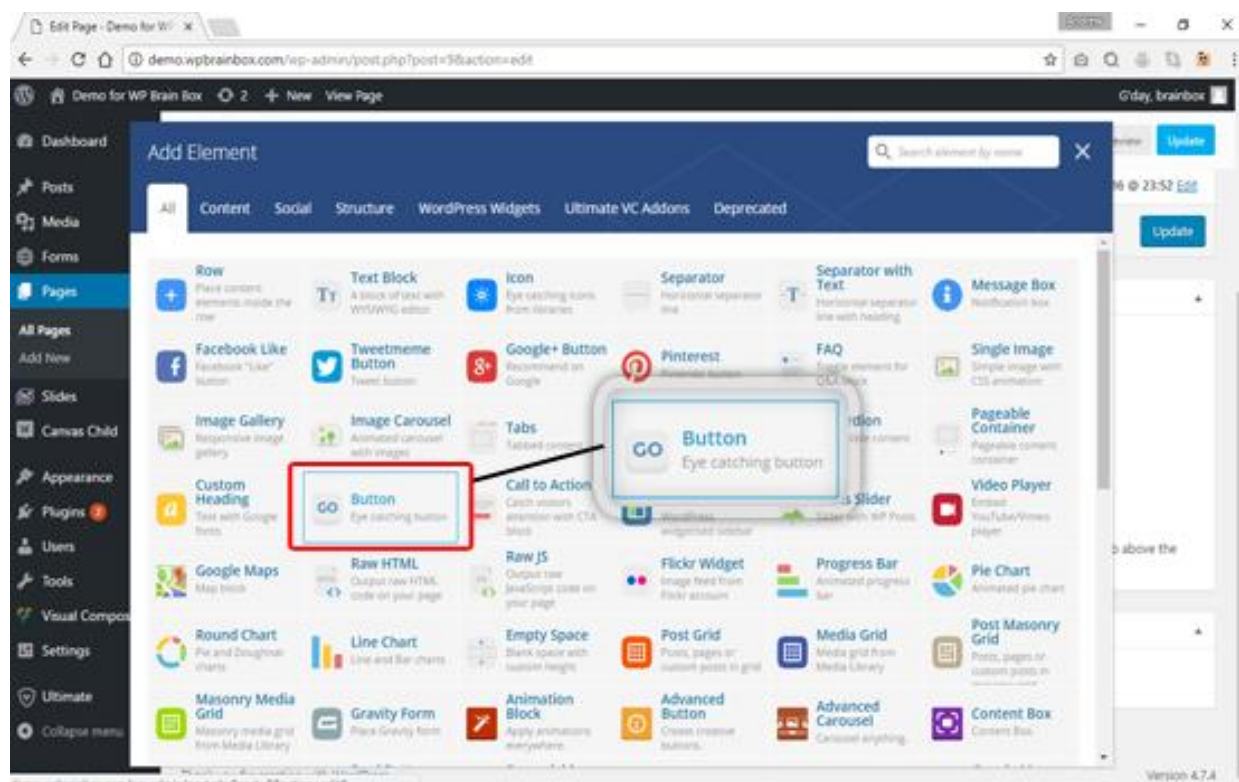

Adding a button with Visual Composer is a really cool way of linking between pages and drawing attention to the actions available on that page.

Step 1: Add New Element

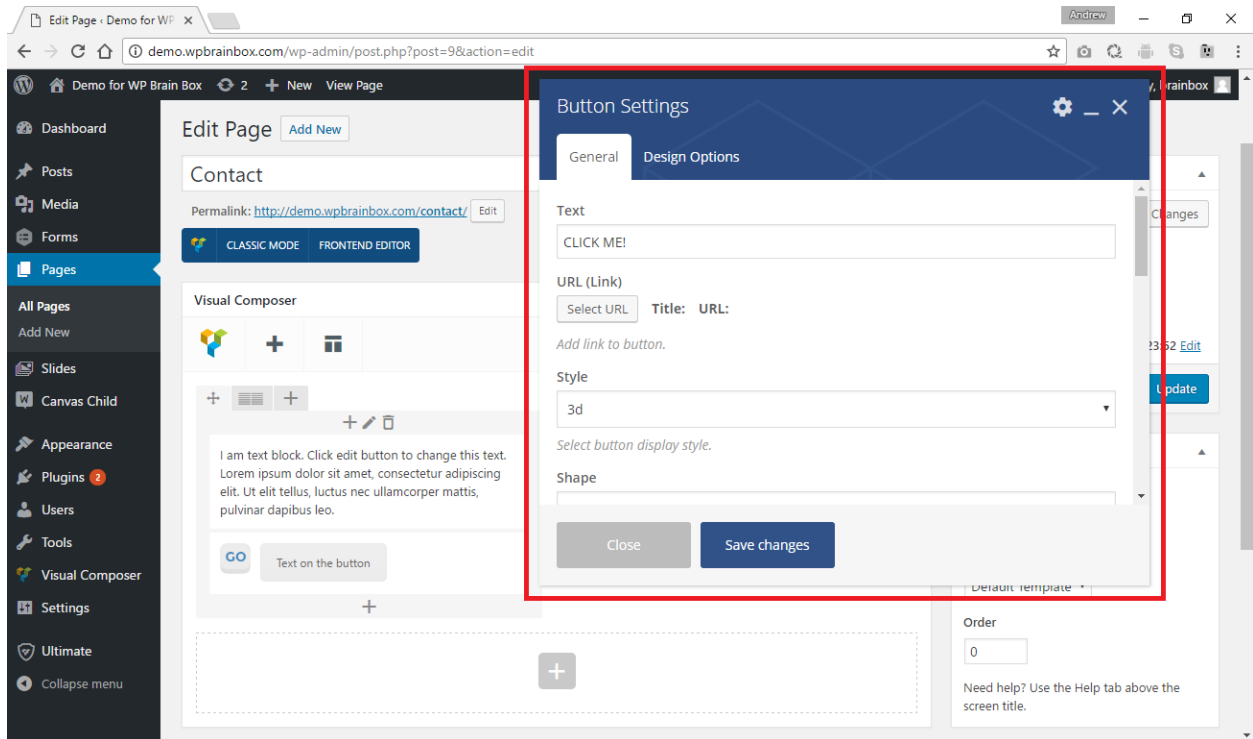

Let's start creating a button. First of all, we need to add the button element. To do that, click on the + icon inside the box.

Step 2: Select Button Element

After clicking the + icon, an **Add Element** box will pop-up. Select the button element. If you're having a hard time looking for the button element inside the **All** tab, you can filter them out when you go to the **Content** tab.

Step 3: Button Setting

Inside the **Button Settings**, a number of properties will be seen. These properties are:

Text – Sets the text of the button.

URL (Link) – URL of the page that you want to link

Style

- Modern
- Classic
- Flat
- 3D
- Custom
- Outline custom
- Gradient
- Gradient custom

Shape

- Sky
- Green
- Juicy Pink
- Sandy Brown
- Purple
- White

Size

- Mini
- Small
- Normal
- Large

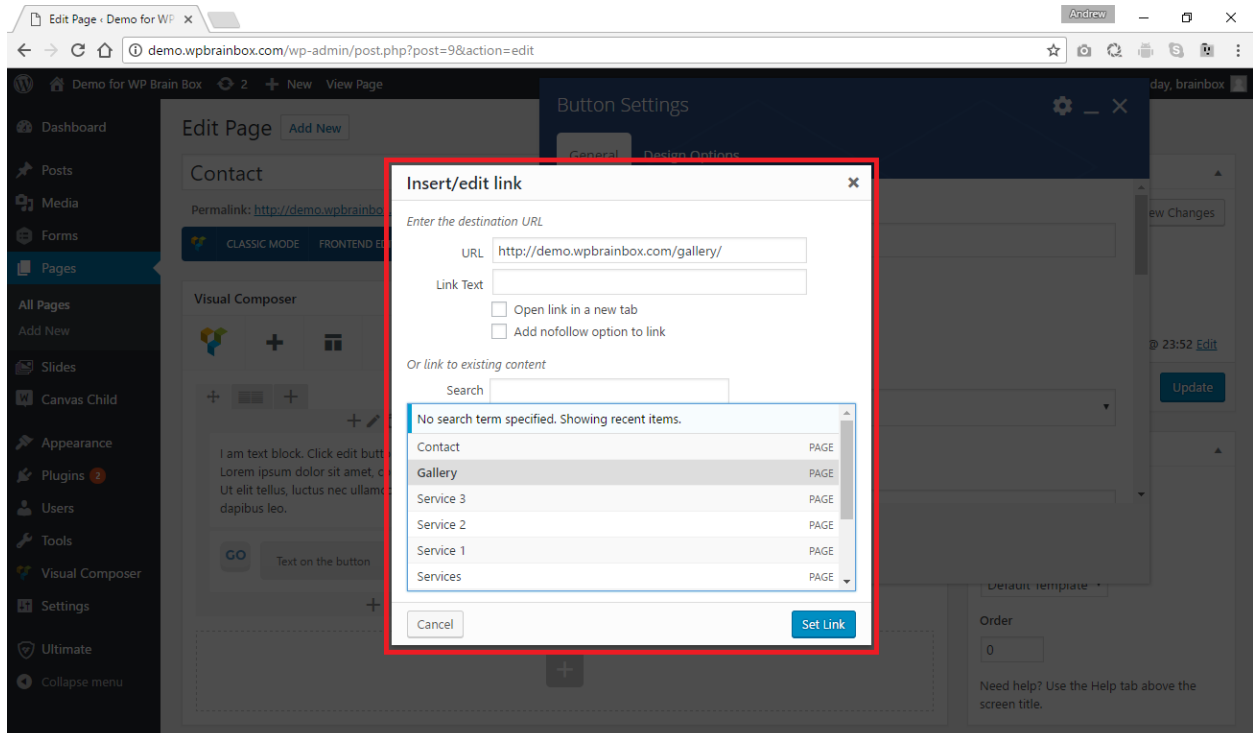

Alignment

- Inline
- Left
- Right
- Center

Set full-width button – Sets the size of the button to full. If the button is placed inside a column, the full width of the button is the full width of the column.

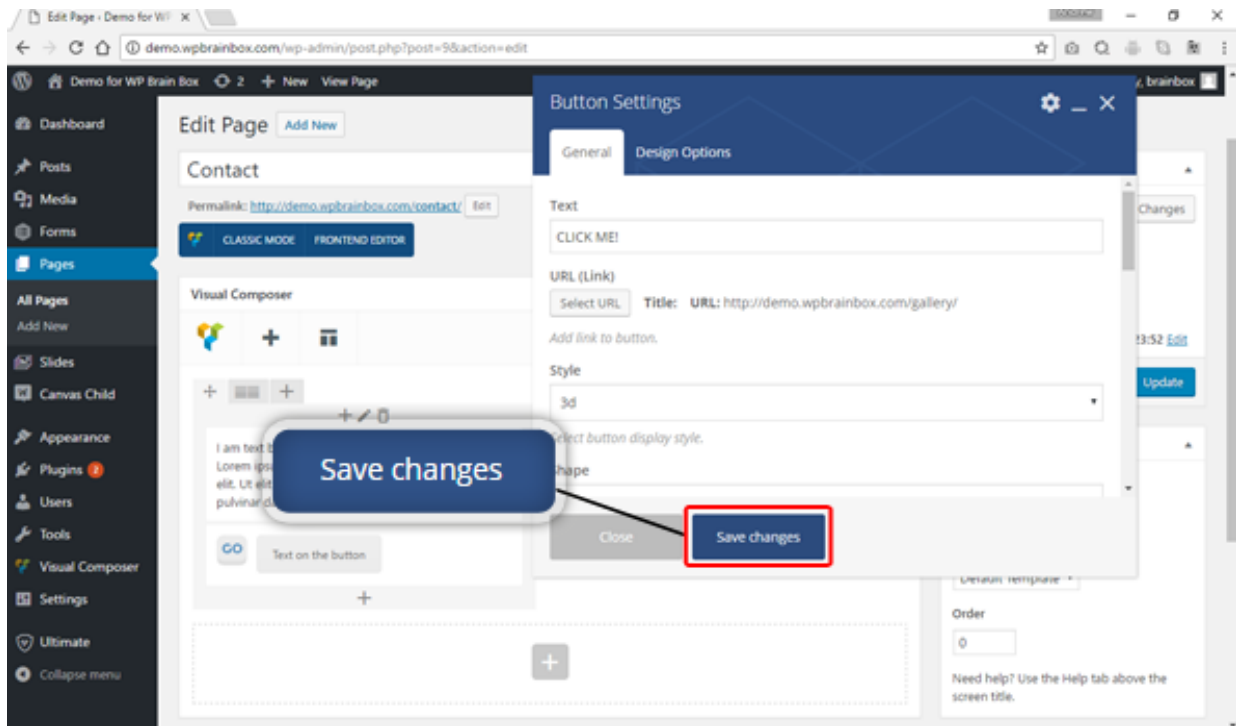

Add Icon – Sets an icon to the button. You can have the icon either before the text or after the text.

Step 4: Set URL Link

If you already have the link and it's ready to be pasted, just paste the link inside the **URL box**. However, if you don't have the link, you can either search the name of the page on the Search textbox or you can scroll down the list of pages under the Search textbox. Once done, click on **Set Link**.

Step 5: Customize button

After customizing your button, let's save our changes by clicking the **Save Changes** button. After closing the **Button Settings** box, let's preview our changes by clicking on **Preview Changes**.
