

DELETING ELEMENTS FROM THE PAGE

USING THE FRONTEND EDITOR OF VISUAL COMPOSER

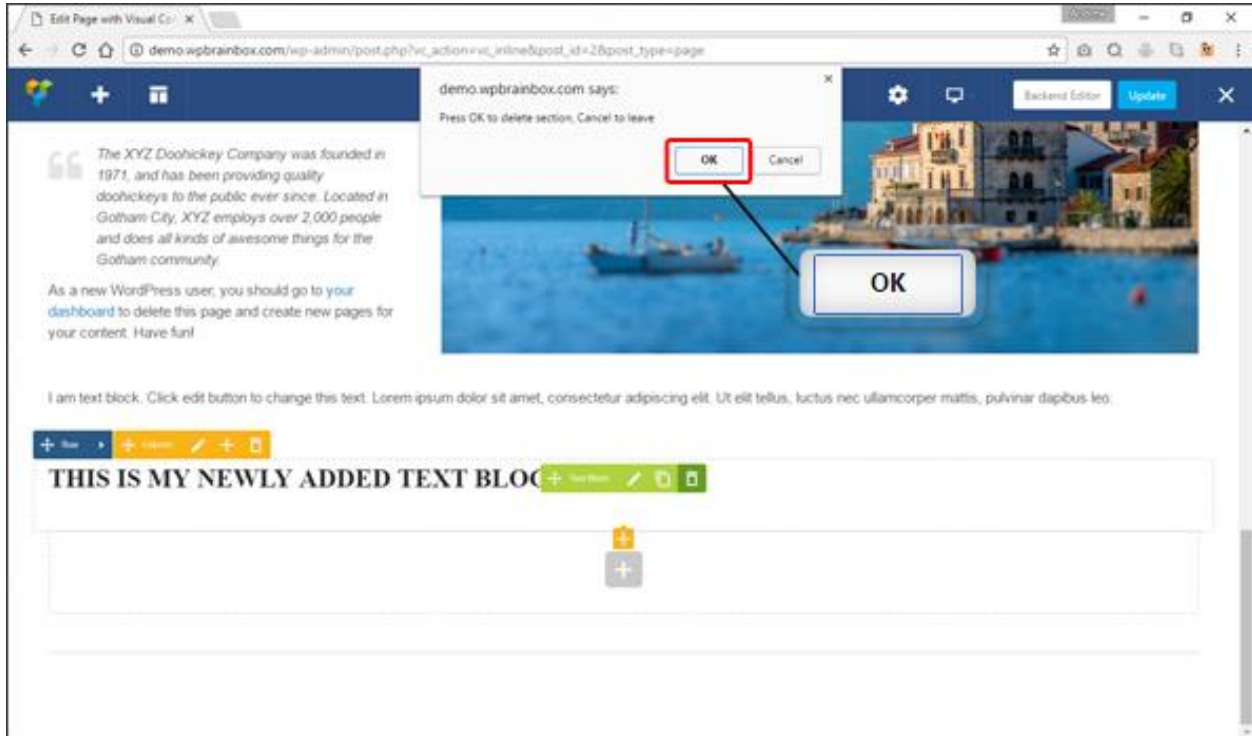

Visual Composer made it easier for you to delete a certain element using its frontend editor. Now, let's try to use its functionality. It works as well with the backend editor.

Step 1: Select the element you want to delete

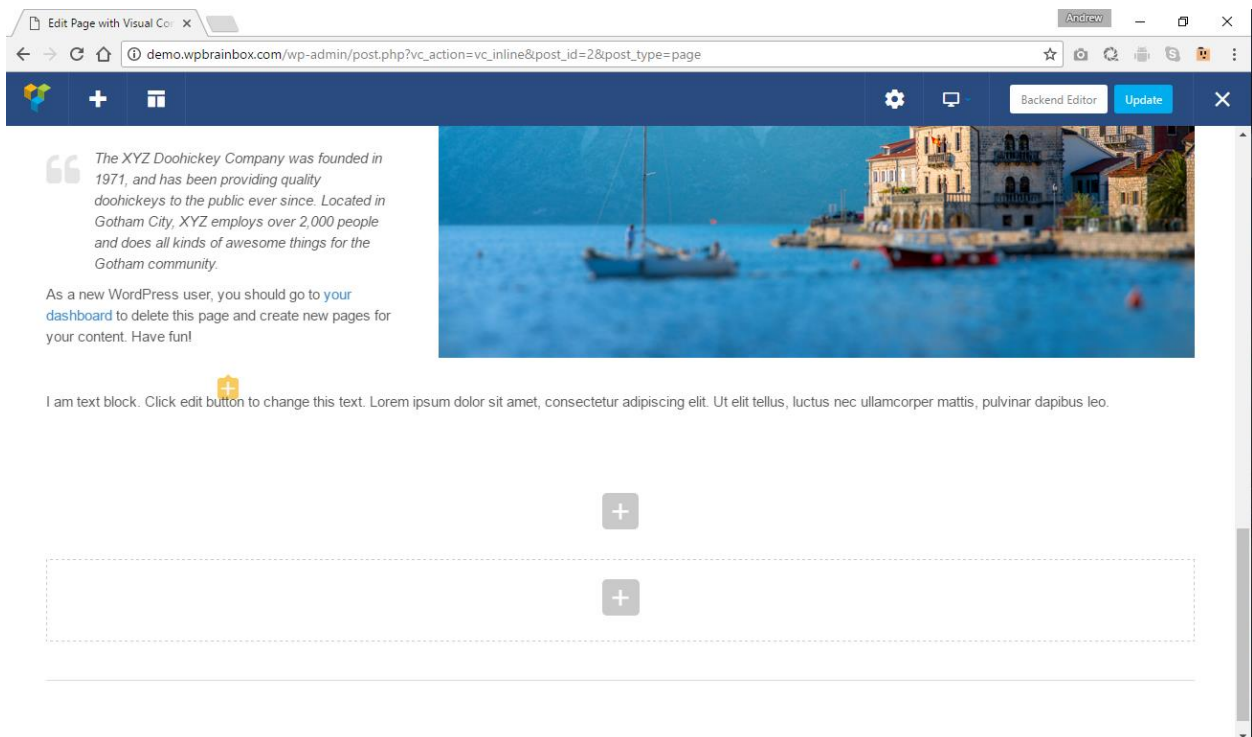

To remove an element, hover your mouse over the specific element and click on the **trash bin** icon inside the green bar.

Step 2: Verification to delete an element

After clicking the trash bin icon, you'll be prompted with a warning to verify and continue the deletion of the element. This is done to prevent the element from accidental deletion. Now, if you are certain, click the **OK** button.

Step 3: Element successfully deleted

Now, the element that we deleted disappears. You can also delete the entire row together with its content.
