

DROPDOWN MENU CONFIGURATION

Homepage View

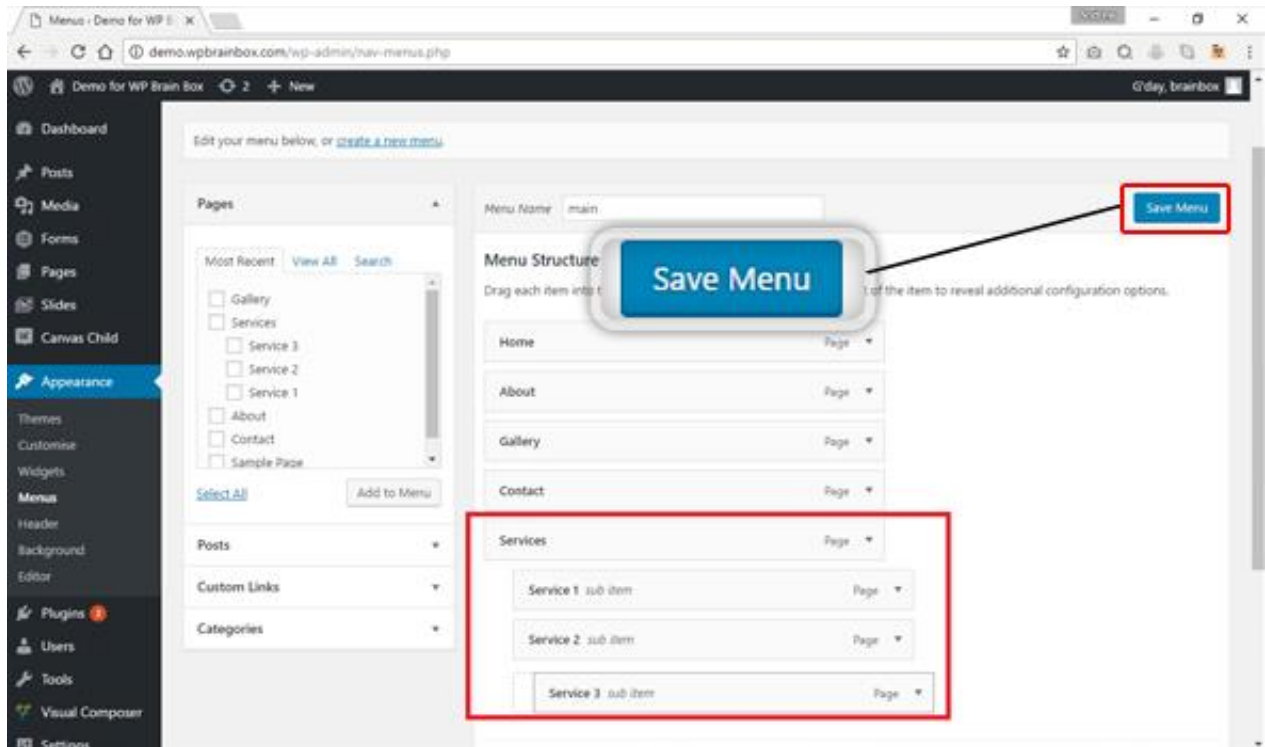

The pages we added to the menu are all strung out on the top level of the menu. But what we really wanted to do is for 1, 2, and 3 to be a dropdown under Services. Let's go to our **Menus** page.

Step 1: Go to Menu page

To edit the menus of your website, let's go to **Menus** under **Appearance** menu.

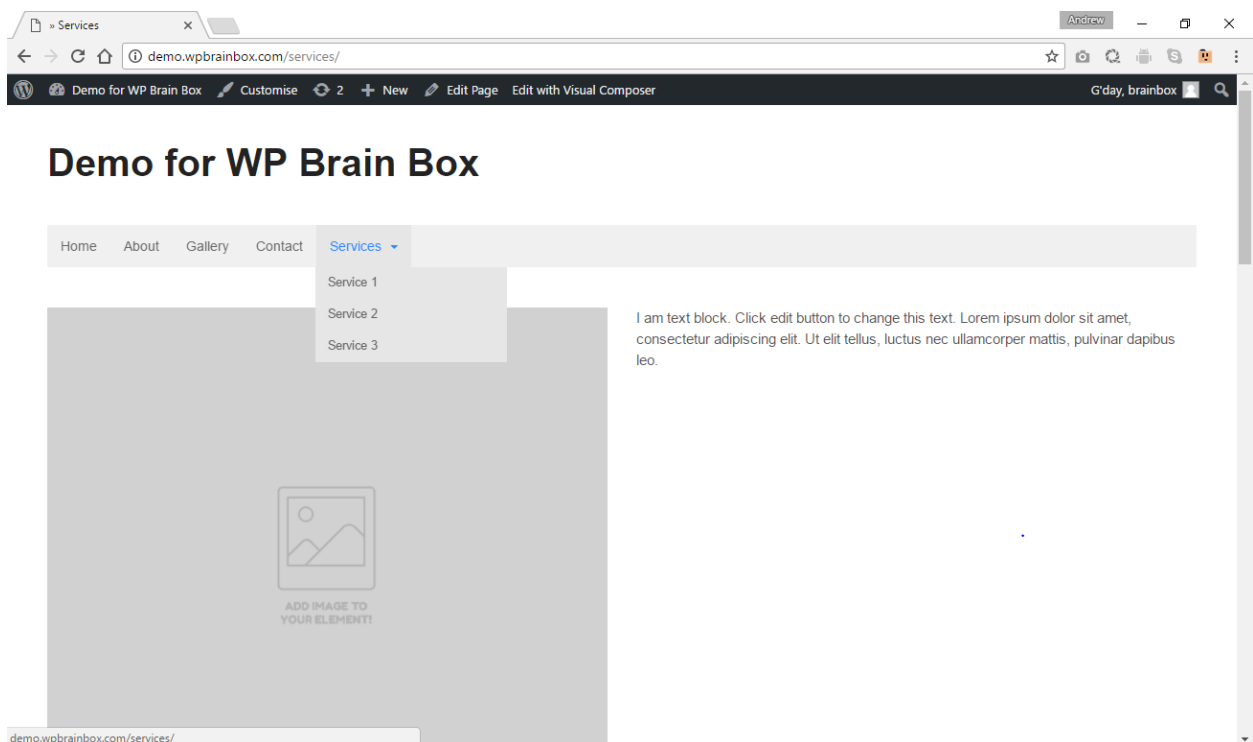

Step 2: Add Sub item to Services page

The trick here is to drag up the page that you want then indent it from the parent page. You can see in the image above how I move the page to the parent page. After you have already placed the pages under the parent page, click **Save Menu**. This will commit the changes in the database. Let's go back again to our homepage to check our changes.

Output

We've got our dropdown menu

Now, as you can see, we've got ourselves a dropdown menu on Services. So those three pages are now under the Services menu.
